

Mosaic: from collage maker to photo studio

Focus editor · manual background removal · styles · demos

LucianoAdonis

2026-09

Editing was the weak half

- All editing lived in a 300px sidebar
- Background removal: one shot, no fixing its mistakes
- No way to save one edited photo
- First visit: an empty canvas, nothing to click

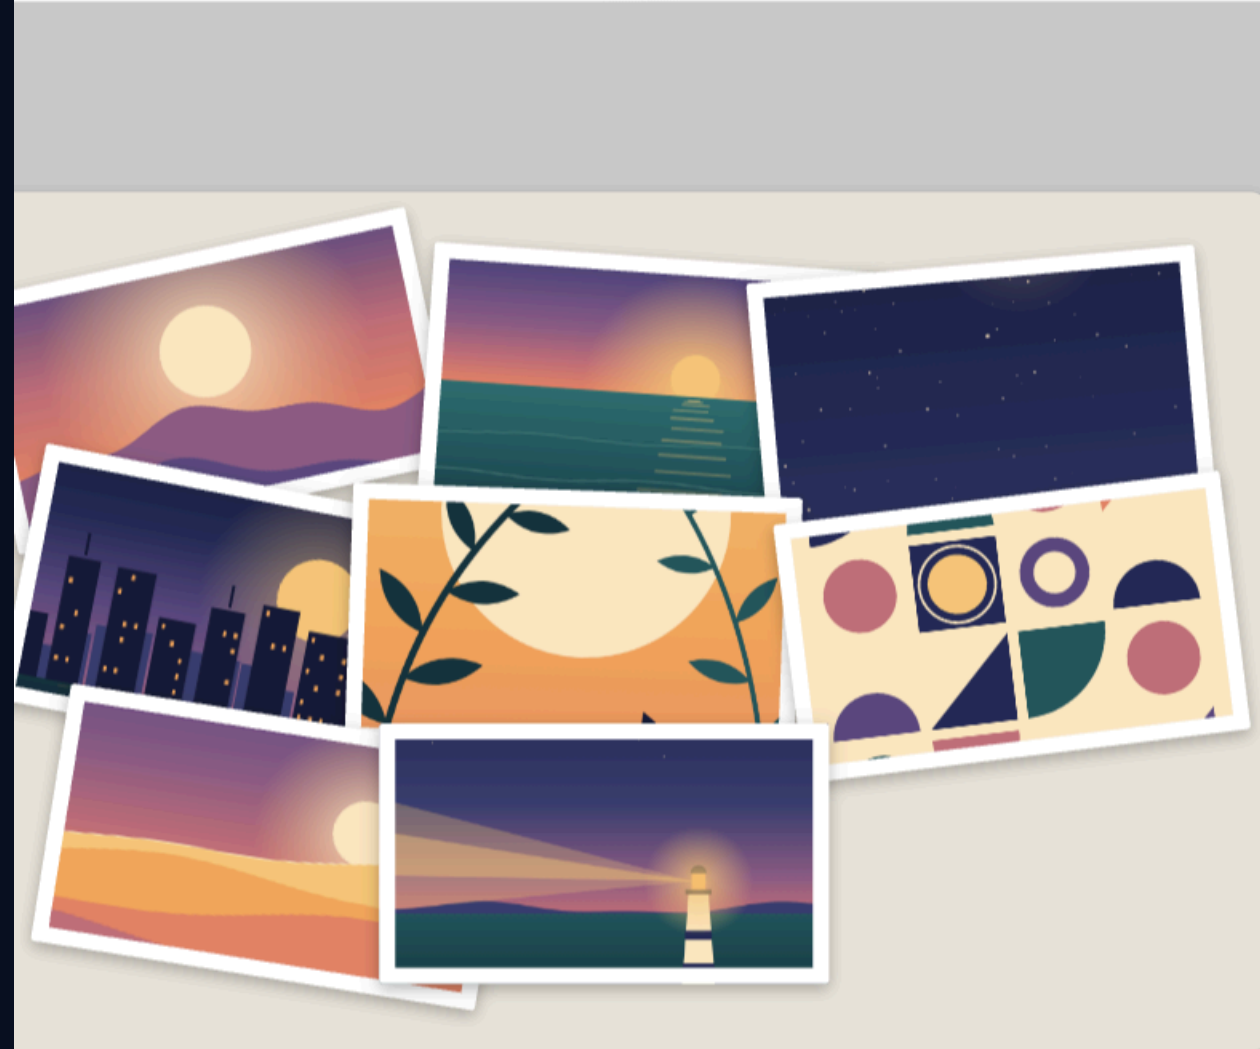

Cool collages first

scatter, styles, gradients, demos

One click to a finished look

- Scatter layout: rotated prints, real shadows
- Seven styles set the whole canvas
- Gradient backgrounds, photo borders
- Demos drawn in the browser, nothing downloaded

The postcards demo, one click from an empty first visit

Demos teach the product

 **Mosaic**
Collages you can re-layout at any time

TEXT & MEMES

top + bottom

top only

bottom only

caption bar

two panel

corner label

add text

bubble

Captions float over the whole canvas, so they survive every layout change.

EXPORT

PNG

JPEG

800px

1600px

3000px

Thumbnail, web, and print. Same render path as the preview.

Each photo as its own thumbnail

256px

512px

Square crops using each photo's own framing, saved one by one.

DEMOS

Then a real editor

remove exactly what you point at

Manual cutout, local pixels

- Erase and restore, soft brushes
- Magic wand removes the colour you click
- Auto edge fill as a starting point
- Per-stroke undo, zoom to the pixel
- Save the photo alone: PNG or JPEG

No service, no upload: every byte stays in the page

Why the editor cannot lie

- Three canvases: source, mask, view
- Undo stores alpha diffs per stroke
- Colour runs the collage's own pipeline
- One render path: preview equals file

Reviewed like a product

three subagents, findings verified before fixing

- It currently fails the Canva-bar test on feedback loops rather than on looks.
- Design review, before the fix round

What review caught, now fixed

- Canvas clicks threw an error since August
- Phones rendered a 260px canvas sliver
- Clear was white text on white
- Selection now shows a ring on canvas
- Undone cutouts resurrected on reload

Measured, not remembered

15/15	366,194	0	2,122
QA checklist items passed with evidence	Pixels one wand click removed	Console errors across three passes	Lines added in the feature commit

What it cost

- Editor works on a 4200px working copy
- Every save rewrites cutout blobs
- Six new modules, largest file 495 lines
- Chip verbs vs radios: deferred redesign

Still open

- [] Publish to mosaic.neorgon.com (Committed on main, not pushed; your call)
- [] Registry blurb undersells the site now (Positioning decision, then make registry)
- [] Multi-tab autosave overwrites itself (Pre-existing; needs cross-tab invalidation)
- [] Cutout save amplification (Split blobs from arrangement in IndexedDB)

Ship it

→ Push main, then refresh the registry blurb

Everything else is committed, reviewed, and measured.
